

OVERVIEW

You need to know that your data assets are safe in case the worst happens. An unexpected disaster can destroy your valuable customer, vendor and employee information and potentially cripple your business. With a remote backup plan, your important data is always safe and easily restored.

WHAT IS REMOTE DATA BACKUP?

ZDS Backup is a fully automated solution that protects your critical data on laptops, desktops and servers. A copy of your files are stored in a secure data center ensuring that a natural disaster, building fire or hardware failure will not cause you a loss of information.

WHAT DO I NEED?

No additional software is required to learn or maintain. Only files that have been edited or added since the previous backup will transmit, reducing bandwidth requirements and ensuring that the most recent changes are saved.

HOW DOES ZDS HELP WITH COMPLIANCE?

Compliance regulations are changing the way companies are required to retain and manage their data. Whether companies have to be in compliance with PCI, SOX, GLBA or HIPAA, ZDS Backup will satisfy most compliance requirements. Multiple file revisions can be saved and restored, giving you the ability to track changes and restore previous version of files.

WHY MANAGED SERVICES?

- Using a managed service, you eliminate the need for expensive hardware, software, and employee training.
- Eliminate the time that your IT staff has to change tapes, discs or maintain hard drives and software.
- With copies of your data saved in a secure data center, you avoid human disasters, natural disasters and technical issues.
- Unlimited data storage to grow with your business requirements.
- ZDS experts are by your side with assistance in configuring the initial backups, management and restorations.

Zocalo Data Systems provides high availability data protection and disaster recovery solutions. Most companies are concerned about the impact of data loss, but the majority don't have a plan in place to deal with these incidents. ZDS Backup Service automates and simplifies data backup and recovery, making it a perfect complement to any disaster recovery plan.

REMOTE BACKUP KEY FEATURES

Backup / Restore software specifically designed for :

- Remote office/branch office data protection
- Data reduction optimized for WAN
- Data encryption “in-flight” and “at-rest”
- Disk-to-disk technology for speed and reliability

Unique technology and advantages

- Agentless technology (install one client per LAN, use dedicated or existing virtual machines)
- License based on compressed capacity (NO agent fees, CPU fees, DB fees, etc.)
- Remote management from a central user interface

Scalable solution

- Grow as needed: stand-alone server to N+1, single storage to extensible storage
- API for DS-System account creation
- Centrally protect remote servers, desktops and laptops

Meets backup / restore needs

- Automated backup and data available for restore 24x7
- Complete solution for remote data protection, including backup/restore, backup archiving and backup data destruction
- Compliance regulations

Protecting your business data and bringing you peace of mind.

SUPPORTED SYSTEMS

VMware	SAP
XenSource	Oracle
